Subject: Conversation with DOW

All,

A few minutes ago, I spoke with [Ex. 4 - CBI] DABT, DOW Chemical, Midland, MI. I forwarded the MSDS for PPH, Basic to her (attached) and requested access to any or all of the original tox data supporting the MSDS and also for analytical support for both concentrated PPH mixtures (purge and trap methods) and dilute methods (direct inject).

[Ex. 4 - CBI] indicated that the supporting studies were in possession of their contractor and contained proprietary information but she would make every attempt to provide the studies to us. I indicated that we would do our best to preserve the propriety of any information that they might be able to share. She also recommended reviewing the REACH file (which we already have). She indicated that the toxicology of PPH is similar across the various analogs and that DOW uses SAR and 'read-across' to support the toxicology of structurally similar glycol ethers.

[Ex. 4 - CBI] also indicated that they can support our efforts with predictive modeling that they will share with us. She indicated that they would contact me later today to provide what information they can.

Chris
